

This website contains information submitted by water systems and laboratories for the purposes of complying with Assembly Bill 746 (AB 746) and the 2017 amendments to drinking water supply permits for more than 1,200 public water systems implementing the State Water Board's Lead Sampling of Drinking Water in Schools program (2017 Permit Amendments). The map reflects data submitted from January 1, 2017 up to the past 60 days. The map is updated monthly as new sample results are submitted.

Under the 2017 Permit Amendments, all public and private K-12 schools in California can request in writing sampling for lead in their drinking water supply at up to five faucets or fountains by the community public water system that serves the school. AB 746 requires all public K-12 schools to be sampled except those that were built or modernized after 2010, schools that were sampled under the 2017 Permit Amendments, schools that sampled independently for lead since 2009 and posted their results publicly, or schools that supply their own water and are permitted as a public water system. AB 746 does not specify how many samples must be taken at a school, and the Water Board encouraged the community water systems and school districts to assess school sites on a case-by-case basis to determine the appropriate number of sample locations. If a school is not shown on this map, it has either not submitted their sampling results prior to the past 60 days, is a private school and did not request sampling, or is a public school that is exempt from sampling under AB 746. For more information on the requirements of AB 746 and the 2017 Permit Amendments, please refer to the [Frequently Asked Questions](#).

The data on this map **does not** include the following:

- Follow up information and/or descriptions of any remedial or corrective actions a school may have taken in response to an action level exceedance.
- Additional sampling and investigation conducted by the school without the public water system's assistance

For additional information regarding a particular school site, you should contact the school directly.
